

The Campaign Behind Race Day

End-to-End Cardmember Event Activation Package

Fictional premium Canadian loyalty program sponsoring the Canadian Grand Prix

Project purpose: Show the full lifecycle of customer marketing work behind a regulated cardmember campaign: strategic brief, segment analysis, stakeholder coordination, compliance checkpoints, bilingual readiness, launch execution, KPI measurement, and post-campaign recommendations.

1. Annual Campaign Brief

Field	Campaign Detail
Campaign Name	The Campaign Behind Race Day
Business Objective	Drive qualified engagement and incremental redemption from premium cardmembers through a timely Canadian Grand Prix activation.
Customer Promise	Give eligible cardmembers a clear, premium, and easy-to-redeem race-day experience without creating confusion around terms, eligibility, or timing.
Primary Segments	1) High-spend travel cardmembers; 2) Active Membership Rewards redeemers; 3) 90-day lapsed cardmembers.
Offer Mechanic	Limited-time race-day experience access, positioned differently by segment: premium access, points redemption, or reactivation.
Channels	Email and in-app placements with segment-specific creative, UTM tagging, and post-launch performance tracking.
Success KPIs	Open rate, CTR, conversion rate, redemption lift, revenue per cardholder, compliance checkpoint pass rate, and customer feedback signals.
Execution Principle	Fewer, more meaningful initiatives with measurable business impact and clear approval controls.

2. Stakeholder Coordination Model

The Excel tracker is the operational backbone of the project. It shows the campaign workback from strategy to reporting and includes every function required for controlled execution: marketing, product, creative, legal, compliance, translation, digital, analytics, and leadership.

Workstream	What the tracker controls	Why it matters
Strategy	Brief, offer rules, business objective, KPI targets	Prevents unclear scope before creative and legal review begin.
Creative	Email and in-app copy, premium positioning, brand QA	Ensures the campaign is compelling but still accurate and approved.
Legal/Compliance	Terms, eligibility, disclosures, regulatory language	Protects the customer promise and reduces late-stage rework.
Translation	French copy review and bilingual QA	Supports Canadian bilingual readiness and consistency across languages.
Digital/Analytics	Build, links, UTM tags, landing pages, KPI tracking	Makes launch measurable and reduces broken customer journeys.
Reporting	Validated KPI pull and senior management summary	Turns campaign results into future strategy.

3. Cardholder Segment Analysis

Segment	Audience Insight	Tailored Message Rationale	Expected Response
High-Spend Travel Cardmembers	Travel-forward members are most likely to value premium access and event status.	Lead with exclusivity, convenience, and race-day experience value.	Highest revenue per cardholder and conversion upside.
Active Membership Rewards Redeemers	Members already understand points and need a timely reason to redeem.	Connect the event to simple points redemption and a memorable experience.	Strong redemption lift and above-target click behaviour.
90-Day Lapsed Cardmembers	Less engaged members need relevance without feeling over-targeted.	Use a lighter reactivation message with urgency and low friction.	Lower conversion, but useful incremental reactivation.

4. Campaign Performance Dashboard Logic

The Streamlit dashboard uses the fictional dataset to show results versus targets by segment and channel. It calculates KPI deltas, estimated conversions, estimated revenue, and compliance pass rate. This makes the project easy to discuss in interviews because it connects strategy, execution, and measurable impact.

Metric	Why it is included
Open Rate and CTR	Shows whether the message and channel strategy earned attention.
Conversion Rate	Shows whether cardmembers moved from interest to action.
Redemption Lift	Shows whether the activation increased points engagement.
Revenue per Cardholder	Connects marketing activity to business value.
Compliance Pass Rate	Shows launch readiness in a regulated financial-services environment.
Customer Feedback Score	Connects campaign results to the customer experience promise.

5. Post-Campaign Report for Senior Management

Executive Summary

The Race Day activation exceeded target across all three cardholder segments while maintaining a 99.3% average compliance pass rate. The strongest results came from high-spend travel cardmembers, where premium access messaging generated the highest revenue per cardholder. Active redeemers showed strong points engagement, while lapsed members delivered useful incremental reactivation without requiring a broad discount-led offer.

KPI Results

Segment	Actual Open Rate	Actual CTR	Actual Conversion	Revenue/Cardholder	Compliance Pass
High-Spend Travel Cardmembers	47.0%	13.2%	4.6%	\$38.50	100.0%
Active Membership Rewards Redeemers	41.0%	10.1%	3.5%	\$26.20	100.0%
90-Day Lapsed Cardmembers	30.0%	6.1%	2.1%	\$14.70	98.0%

What Drove Performance

- High-spend travel members responded to premium access because the offer matched an existing lifestyle behaviour rather than forcing a generic promotion.
- Active rewards redeemers performed above target because the campaign connected the event to an existing points habit and made redemption feel timely.
- The lapsed segment benefited from a lighter message and clear deadline, which created urgency without adding friction or over-messaging.

Regulatory and Compliance Process

The campaign used a controlled approval path before launch. Legal reviewed the offer terms and conditions, compliance reviewed claims and disclosure language, translation completed French copy QA against the final English master, and digital/analytics completed link, landing page, and UTM validation. This reduced launch risk and kept the customer journey aligned with the approved customer promise.

Recommendations for Next Activation

1. Repeat the premium-access message for high-spend travel members, but test a stronger in-app reminder closer to race weekend.
2. Create a points-plus-experience offer for active redeemers because this group showed strong redemption lift and above-target engagement.
3. Keep lapsed cardmember targeting narrow and behaviour-based. The segment is useful for reactivation, but broad outreach may reduce relevance.

Interview Positioning

Best one-line explanation: I built a fictional end-to-end cardmember event activation package that shows not only the campaign idea, but the real execution system behind it: segment strategy, stakeholder workback, legal/compliance checkpoints, bilingual readiness, KPI measurement, and post-campaign recommendations.

Note: All campaign data and company details are fictional and created for portfolio demonstration only.
